Current #38

Metals

Support your body while it is still strong.

A search, held as a search

Current #37 named persistent antigen as weather. This page names another load some mills have to work around: metals. Mercury is the public name most people already carry. Credit a personal search to Eric Gladen. Credit Metabolic Correction to Michael J. Gonzalez.

A metal can sit on an enzyme. An enzyme can sit on the mill that mints ATP. That is why this page exists. It does not treat poisoning. It does not sell a chelator. It does not take a chair in a school-board fight.

Hold the public record together

Thimerosal was removed from most childhood schedules around 1999–2001. The Institute of Medicine reviewed vaccines and autism in 2004. Prevalence curves after removal did not close the question for every family who was already living it. Hold those three facts on the same page. This Current does not pick a verdict for you.

| This page                                    | What it is not                         |
|----------------------------------------------|----------------------------------------|
| Mercury as weather after the five.           | A sixth public pillar.                 |
| A man’s search, honored.                     | A chelation protocol we write.         |
| IOM, removal, and the curve — held together. | A vaccinate-or-refuse instruction.     |
| A question for licensed care.                | A film or an organization we co-brand. |

The copilot stays

If a question is about metals in your own body, take it to a licensed professional who knows you. Current #18 still stands. Cutler, EDTA, and DMSA are not Foundation tools. Do not add, stop, or delay licensed care from this page.

How you keep it

Keep the five first. Eat real food. Notice the mouth — Current #35 — as one room where metal can sit. Belonging does not require a film, a docket, or a chelator.

Be brave enough to honor a search without joining a war

You are not behind if you never watched the film. You are not too late. Your mills are still minting every second of every day. Feed them. Then get out of the way.

The question

Will you treat metals as weather after the five — not as a sixth pillar? The answer is yours. You can take it. You can leave it. No one can take it for you.

If you take it, keep tonight's five. Take a metal question to someone licensed who knows you. That is Metals, kept as weather.

If you want to keep learning, keep flowing with our Currents. Pain as weather is next.

## Notes

- This is education. It does not diagnose metal toxicity, treat, dose a chelator, or claim to cure.
- It does not replace your physician, your medications, or the care you already have. It takes no vaccinate-or-refuse chair.
- If a question is about your own body, take it to a licensed professional who knows you.
- The Foundation does not sell chelators, films, IVs, lab panels, or bottles as the price of belonging. It does not co-brand Trace Amounts, CHD, or MAHA.
